Corporate Management Suite

Secure Check Cashing offers three unique administrative tools to aid in management of networked, multi-location check cashing environments. These tools all provide diverse, yet important, functionality that enhances and simplifies remote management.

Report Maker

Report Maker is a stand-alone application geared towards providing a corporate data specialist easy, read-only access to an organization's local, regional and global data. The application's easy-to-use interface makes it an excellent tool for data mining marketing trends, reconciling accounting systems, managing quality control or preparing executive reports.

Corporate POS Manager

The Corporate POS Manager is a stand-alone application designed with the corporate purchasing agent general manager in mind. The system expands on the tools provided in our Check Cashing application to provide the buyer a Master Catalog of items for sale throughout a selling chain. The Master Catalog provides for management of multiple stores with different pricing and product availability with only a few mouse clicks.

Data Warehouse

The SCC Data Warehouse is a set of tools and web services geared towards providing large organizations on-demand access to their SCC hosted data. Included in the package is the Portal Demonstrator, a tool that provides documentation, programming examples and live query demonstrations. Using its examples, Programmers and Database Administrators can initiate raw data electronic transfers and loads (ELT) between SCC's data servers and an organization's Inventory Control systems, Accounting systems or general Database Servers.
